PROJECTS

Inventory Management System using Python and MySql | [LINK](#)

- This Python-based inventory management system allows you to manage and interact with an inventory database using MySQL.
- With this system, you can insert, update, and query data from various tables such as products, categories, suppliers, orders, and customers.
- This project is fully written in python and source code is also available on github

Data Warehouse Project | [LINK](#)

- Building a modern data warehouse with SQL Server, including ETL processes, data modelling, and analytics.
- Develop SQL-based analytics to deliver detailed insights into :- Customer behaviour, Product performance, Sales trends.
- This insight empowers stakeholders with key business metrics, enabling strategic decision making.

Pizza Sales Analysis | [LINK](#)

- This project analyzes pizza sales data to derive meaningful insights using SQL for data processing and Tableau for visualization.
- The key performance indicators (KPIs) and visualizations help in understanding sales trends, customer preferences, and product performance.

CERTIFICATIONS

Foundations: Data, Data, Everywhere (Google) | [LINK](#)

- Define and explain key concepts involved in data analytics including data, data analysis, and data ecosystems.
- Discuss the role of spreadsheets, query languages, and data visualization tools in data analytics.
- Discuss the use of data in the decision-making process.

Python For Data Science, AI Development (IBM) | [LINK](#)

- Develop a foundational understanding of Python programming by learning basic syntax, data types, expressions, variables, and string operations.
- Demonstrate proficiency in using Python libraries such as Pandas and Numpy and developing code using Jupyter Notebooks.
- Access and extract web-based data by working with REST APIs using requests and performing web scraping with BeautifulSoup.

Data Analytics Job Simulation (Deloitte) | [LINK](#)

- Completed a Deloitte job simulation involving data analysis, dashboard using Tableau.
